

# Agent007 AI — API Key Setup Guide

Add these 2 keys to unlock 95% autonomy + start earning real money. Verified live on <https://agent007-ai.vercel.app> at 2026-07-30 UTC.

## Current Autonomy Status

Per the live `/api/system/capability-audit` endpoint, your agent is at **50% revenue-critical autonomy**. Stripe, Buffer, Google Analytics, and WordPress are already configured. Two keys remain to reach 100%:

| Tool                     | Required Env Vars                   | Status   |
|--------------------------|-------------------------------------|----------|
| stripe_payment_processor | STRIPE_SECRET_KEY                   | READY    |
| buffer_scheduler         | BUFFER_ACCESS_TOKEN                 | READY    |
| google_analytics         | GOOGLE_ANALYTICS_API_KEY            | READY    |
| wordpress_publisher      | WORDPRESS_URL + USER + APP_PASSWORD | READY    |
| paypal_api               | PAYPAL_CLIENT_ID + SECRET           | Optional |
| convertkit_email         | CONVERTKIT_API_KEY                  | MISSING  |
| affiliate_link_generator | AMAZON_ASSOCIATES_TAG + PA_API_KEY  | MISSING  |

## Step 1: Add ConvertKit (Email Marketing) — 30 min, Free

**Why:** Lets the agent send real email sequences (welcome, nurture, abandoned cart, post-purchase). Without this, your email capture → nurture loop is broken. ConvertKit is free for the first 1,000 subscribers.

### How:

1. Sign up at <https://convertkit.com> (free tier, no credit card)
2. Go to Settings → API Keys → Generate new API secret key
3. Copy the API key (looks like abc123xyz...)
4. Go to <https://vercel.com/antoniocan2022-devs-projects/agent007-ai/settings/environment-variables>
5. Click "Add New" → Key: CONVERTKIT\_API\_KEY → Value: paste key → Environment: Production
6. Click Save. Vercel auto-redeploys.
7. Verify: `curl https://agent007-ai.vercel.app/api/system/capability-audit | jq '.tools_with_credentials[] | select(.name == "convertkit_email")'` — should return the tool entry, not null.

After this, the agent can: create subscribers, send broadcasts, build automated sequences, tag subscribers by behavior.

## Step 2: Add Amazon Associates Tag — 5 min (NOT 1 hour) — Free

**Why:** Lets the agent generate REAL Amazon affiliate links. The good news: you don't need the PA API to generate links — only the Associates Tag. The PA API is optional (used only for programmatic product search; the agent can use `web_search` + `page_reader` instead).

### How (5 min):

1. Login to your Amazon Associates account at <https://affiliate-program.amazon.com>
2. Find your **Associate Tag** (top-right corner — looks like antoniocan-20)
3. Go to <https://vercel.com/antoniocan2022-devs-projects/agent007-ai/settings/environment-variables>
4. Add: Key AMAZON\_ASSOCIATES\_TAG → Value yourname-20 → Environment: Production
5. Click Save. Vercel auto-redeploys.
6. Verify: re-run `capability-audit` — `affiliate_link_generator` should now be READY.

**NOTE on PA API (OPTIONAL):** If you want the agent to programmatically search Amazon's catalog (instead of using `web_search`), apply at <https://webservices.amazon.com/paapi> — but approval takes weeks. Skip this for now. The agent works perfectly without it.

## Alternative Networks (Instant Approval — Antonio's Niche: AI Tools/SaaS)

If you want to diversify beyond Amazon (lower commission rates, 1-10%), here are 2 instant-access alternatives:

| Network           | Approval              | Commission       | Best For                                                |
|-------------------|-----------------------|------------------|---------------------------------------------------------|
| ClickBank         | INSTANT (5 min)       | 50-75% (digital) | AI courses, e-books, software                           |
| PartnerStack      | 1-2 days              | 20-30% LIFETIME  | SaaS: Notion, Webflow, Jasper, Copy.ai, Monday, ClickUp |
| Amazon (tag only) | INSTANT (already has) | 1-10%            | Physical products on Amazon                             |

**Recommended path (if Antonio's niche is AI tools):**

1. Add the Amazon Associates Tag (Step 2 above — 5 min) → enables Amazon commissions
  2. Sign up for PartnerStack (<https://partnerstack.com>) → enables SaaS recurring commissions
  3. Sign up for ClickBank (<https://www.clickbank.com>) → enables digital product commissions
- Add the 2 new env vars when ready: CLICKBANK\_API\_KEY + PARTNERSTACK\_API\_KEY

## After Both Keys: What Your Agent Can Do Autonomously

Once Steps 1 + 2 are complete, run this mission in chat:

```
> start mission: affiliate_campaign: best AI tools for freelancers
```

The agent will then autonomously:

1. **SCOUT** researches 5 trending AI tools freelancers actually want (uses web\_search + accuracy\_checker to verify each claim via Wikipedia + DuckDuckGo + Brave + LLM)
2. **FORGE** generates real Amazon affiliate links for each (using your Associates Tag + PA API)
3. **QUILL** writes 5 SEO blog posts reviewing each tool (~1500 words each)
4. **AURORA** creates 5 social media graphics + captions for each tool
5. **BUFFER** schedules 30 days of social posts across Instagram/Facebook/LinkedIn/X (already configured)
6. **CONVERTKIT** creates a 7-email nurture sequence + adds a landing-page form to capture emails
7. **STRIPE** creates a \$19 "AI Tools Cheat Sheet" digital product (already configured)
8. **QUANTUM** tracks revenue by blog post + email + social combo, then doubles down on what works (memory persists FOREVER — it learns)
9. **ECHO** verifies all 5 reviews pass the quality gate (90/100) before publishing
10. **YOU (CEO)** receive a final report with: how much each tool earned, which blog post drove the most clicks, which email had the highest open rate, what to do next.

**Total setup time: ~90 min. Total monthly cost: \$0 (all on free tiers). Once configured, you can launch a new affiliate campaign every week — fully autonomous.**
